

Report on the revision of the article

On Runge type theorems for solutions to strongly uniformly parabolic operators

by P.Yu. Vilkov and A.A. Shlapunov

submitted to *Siberian electronic mathematical reports*

In the revised version, the authors took into account the remarks, comments, and suggestions listed in the report on the first version. Additionally, the presentation and the linguistic style have improved significantly.

As mentioned in the previous report, the presented results are interesting, non-trivial and are surely of interest not only to experts in approximation theory. Therefore, I am happy to recommend the paper for publication in *Siberian electronic mathematical reports*.

Three very minor comments:

- p. 2, l. -13: Correct "solitions" to "solutions"
- p. 8, l. 11: There is a closing bracket missing; same in l. 12
- p. 8, l. 22: Correct "cruail" to "crucial"
