

Response to the review on the paper “On the collection process”

I would like to thank Reviewer for careful reading of the paper and very valuable comments and remarks.

All misprints found have been corrected, all suggestions for additional examples have been accepted. Also, the examples from Section 6 have been reworked a bit. The introduction has been expanded by information on the obtained collection formulas in Section 6. The comments on the set $D(R)$ and the predicates $E_R, P_{Q,R}$ in Section 3 have been completely reworked. Missing information on the L -conditions have been added in Section 5.

Other changes can be seen in the pdf-file of the paper.
